

Hedera Hashgraph Training Materials

Interactive Exercise 11 - Hedera Consensus Service

[Module 6 – Lesson 10](#)

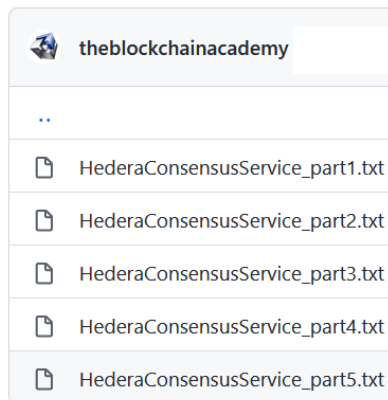

Note: All Prerequisites must be completed.

Interactive Exercise 11 - The Hedera Consensus Service

Module 6 - Lesson 10

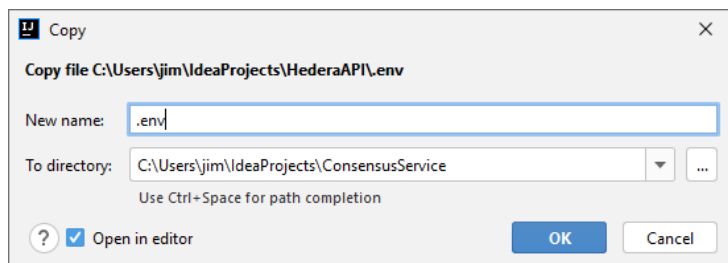

Use code in:

https://github.com/theblockchainacademy/Hedera/tree/main/Hedera_5_ConsensusServiceExercise5 and complete the exercise using the code in the repository. Iteratively complete the exercise using files HederaConsensusService_part1.txt to HederaConsensusService_part5.txt.

Start IntelliJ and click New Project called ConsensusService

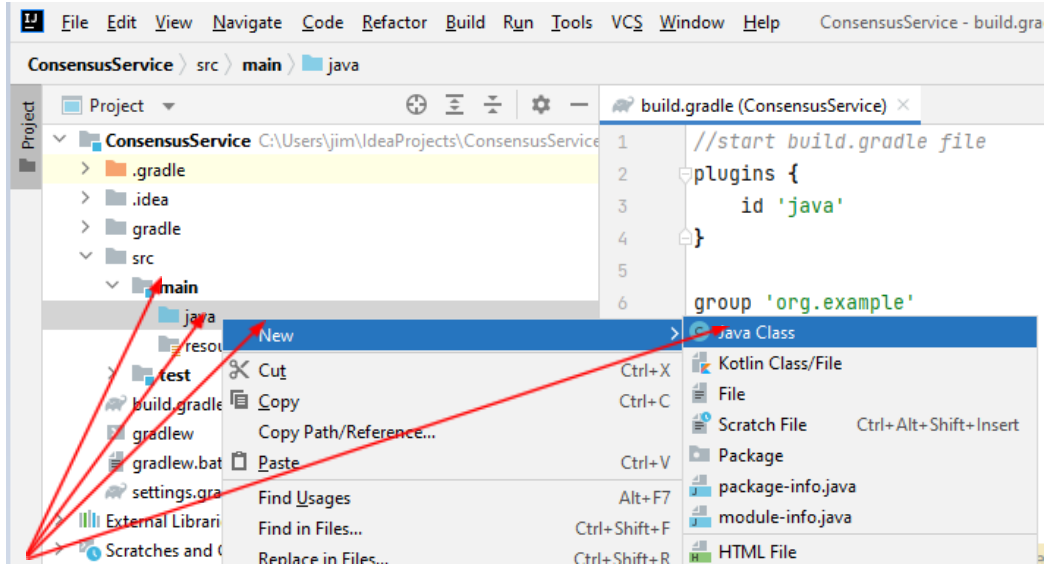

Follow the IntelliJ Steps 1 – 7, from assignment 1, or the previous exercise. Make sure the .env and build.gradle files are updated. You may copy paste in the .env file and build.gradle files from the previous exercises. [The same .env and build.gradle files are required.](#)

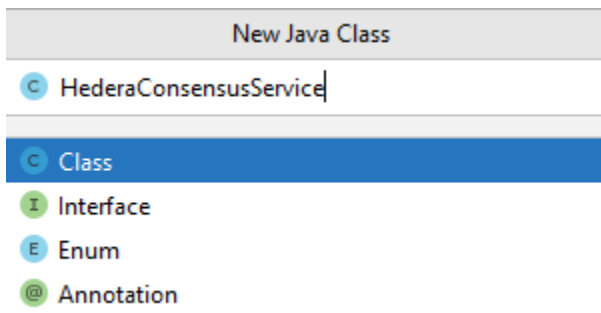

Create a new class called HederaConsensusService

In the project expand \src\main

Right click on \src\main\java, and click New -> Java Class

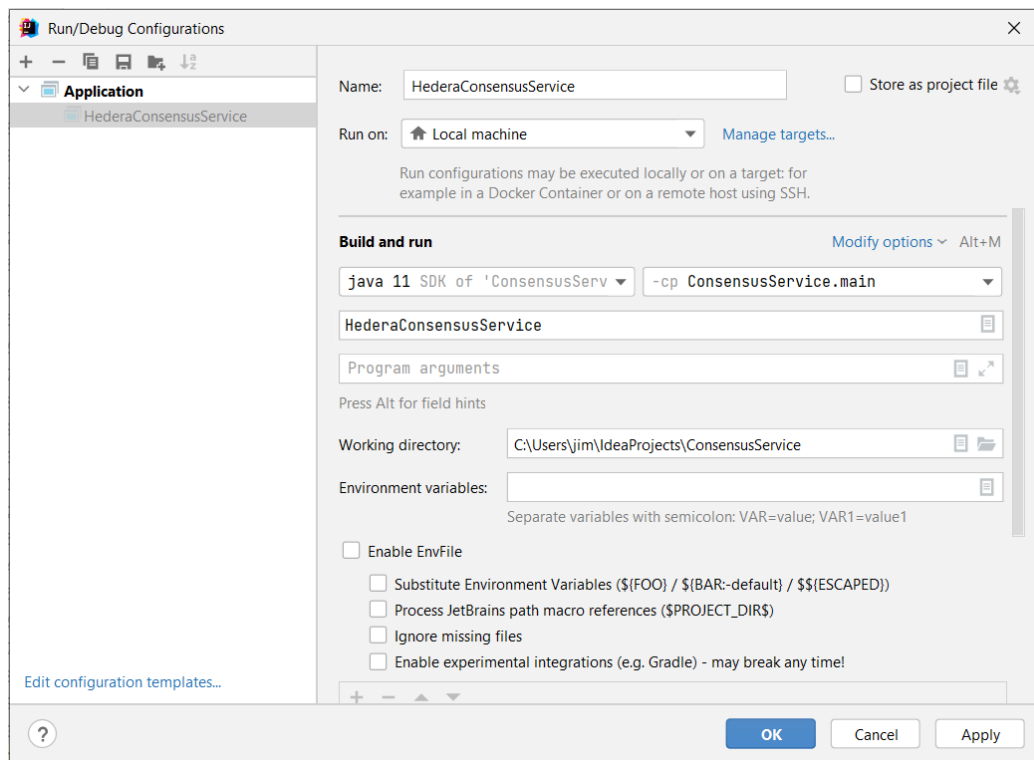

Enter HederaConsensusService and tap the enter key.

The HederaConsensusService class file will open.

Validate project configurations, see **IntelliJ step 9**. Project configurations will resemble the image below.

```
import com.hedera.hashgraph.sdk.*;
import com.google.protobuf.ByteString;
import io.github.cdimascio.dotenv.Dotenv;
import java.util.concurrent.TimeoutException;
```

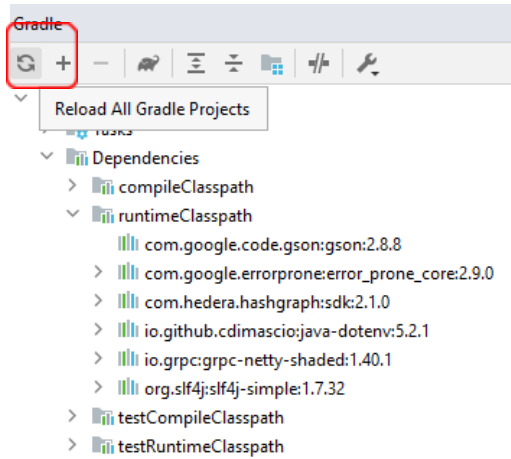

Create the main method as shown below.

```
public static void main(String[] args) throws TimeoutException,
PrecheckStatusException, ReceiptStatusException {

}
```

Update the Gradle dependencies.

Click the Gradle button in the upper right corner. Click the **Refresh Gradle Project** button.

Close the Gradle tools, click the  button in the upper right corner.

The class file should look similar to the image below.

```
HederaConsensusService.java x
1  import com.hedera.hashgraph.sdk.*;
2  import com.google.protobuf.ByteString;
3  import io.github.cdimascio.dotenv.Dotenv;
4  import java.util.concurrent.TimeoutException;
5
6  public class HederaConsensusService {
7
8  public static void main(String[] args) throws TimeoutException, PrecheckStatusException, ReceiptStatusException {
9
10
11
12  }
13
14 }
```

1. Obtain your account ID and private key from the .env file
2. Create a client from the Hedera testnet,
3. Set your account ID and private for the testnet client.
4. Use [TopicCreateTransaction](#) to create a transaction object and call setSubmitKey, setTopicMemo, and setAdminKey
5. On the transaction object, call execute client. This creates a transaction response object.
6. Get a transaction receipt. Call the getReceipt method on the transaction response object.
7. To return the topic ID, call the topicID method on the receipt object and output it to the console.

Refer to the solution on GitHub: [HederaConsensusService_part1.txt](https://github.com/theblockchainacademy/Hedera/blob/main/Hedera_5_ConsensusServiceExercise5/HederaConsensusService_part1.txt),
https://github.com/theblockchainacademy/Hedera/blob/main/Hedera_5_ConsensusServiceExercise5/HederaConsensusService_part1.txt

The output will appear similar to below

```
3:33:09 PM: Executing task ':HederaConsensusService.main()'...

> Task :compileJava
> Task :processResources NO-SOURCE
> Task :classes

> Task :HederaConsensusService.main()
[hedera-sdk-6] WARN com.hedera.hashgraph.sdk.TransactionReceiptQuery - Retrying node 0.0.3 in 250 ms after failure during attempt #1: OK
[hedera-sdk-0] WARN com.hedera.hashgraph.sdk.TransactionReceiptQuery - Retrying node 0.0.3 in 500 ms after failure during attempt #2: OK
[hedera-sdk-4] WARN com.hedera.hashgraph.sdk.TransactionReceiptQuery - Retrying node 0.0.3 in 1000 ms after failure during attempt #3: OK
The new topic ID is 0.0.2908164

Deprecated Gradle features were used in this build, making it incompatible with Gradle 8.0.

You can use '--warning-mode all' to show the individual deprecation warnings and determine if they come from your own scripts or plugins.

See https://docs.gradle.org/7.1/userguide/command\_line\_interface.html#sec:command\_line\_warnings

BUILD SUCCESSFUL in 4s
2 actionable tasks: 2 executed
3:33:14 PM: Task execution finished ':HederaConsensusService.main()'.
```

8. Set a message for the topic ID. Use TopicMessageSubmitTransaction set the topic ID to the newly generated topic ID using the setTopicID method. Set the message using the setMessage method.
9. This will create a TopicMessageSubmitTransaction object.
10. Use the TopicMessageSubmitTransaction object and call the getMessage method.
11. Output the message to the console and confirm it was the message passed in.
12. Sign in with the client and start to submit transaction to a Hedera network, transaction consensus status.
13. Create and submit an account info query to the network. Output the results to the console.
14. Use TopicInfoQuery to query all topic metadata. Pass in t to the console.

Refer to the solution on GitHub: [HederaConsensusService_part2.txt](https://github.com/theblockchainacademy/Hedera/blob/main/Hedera_5_ConsensusServiceExercise5/HederaConsensusService_part2.txt),
